

# Raingarden

## What is this Project

Master Water Stewards Sue and Bruce installed a raingarden on this property, which contains native plants that will capture rainwater and pollutants, as well as dry creek beds will run into the raingarden, which slow rainwater flows and reduce soil erosion.

## Why Install a Raingarden?

This project will reduce the amount of water that runs off this property into stormdrains. Reducing the runoff helps keep our lakes and rivers clean! Everyone plays a part!

## Project Details:

- ◆ **150 sq ft raingarden**
- ◆ **Captures a total of 462.5 gallons for every inch of rain!**
